Re: Master Metal Site, Cleveland, Ohio

Dear Mr. Alcamo:

As mentioned during your phone conversation with Dean Pisani the week of the 16th of June, Entact will be implementing a laboratory change to further assist in the expedited and safe completion of removal activities at the Master Metals Site in Cleveland, Ohio.

ENTACT will utilize ATC/ATEC Laboratory of Indianapolis for air sampling analytical services. NET was inadvertently identified in the Phase I Work plan as the single laboratory for all sampling services. NET does not have the instrumentation to run analytical test on the filters utilized in the PM-10 air monitoring system.

ATC/ATEC is an accredited laboratory with offices nationwide. They have been approved through U.S. EPA to perform the identical analytical services at other Superfund projects that ENTACT has completed.

Also, local laboratory Ross Analytical Services, Inc. of Strongsville, Ohio will be utilized for portions of the waste characterization that require accelerated turnaround.

Please let me know of any comments or questions that you may have regarding this information. I can be contacted at (216)-687-0461 or digital pager (800)816-8982.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Erich Kissick".
